Processes Drive Businesses,
We Drive Processes.

Skelta SharePoint Accelerator

The complete BPM solution for SharePoint

Skelta SharePoint Accelerator is a full service BPM solution that seamlessly integrates Microsoft SharePoint 2007 and WSS 3.0 with your business processes. It extends advanced BPM functionality to SharePoint 2007 to create a powerful integrated platform for collaboration, business intelligence, enterprise content management, and strategic business solutions. Skelta SharePoint Accelerator is business user-friendly and facilitates creation of an automated BPM environment without significant investments in software development.

Key Features

Powered by Skelta BPM.NET, Skelta SharePoint Accelerator provides advanced BPM functionality to SharePoint 2007, native capabilities for collaboration, portals, enterprise content management, business intelligence, business forms and processes.

Collaboration Features

- › Integrates with SharePoint's database, Active Directory and third-party LDAP directories
- › Enables custom attributes for resources
- › Delivers tasks to SharePoint lists
- › Advanced queue management for flexibility in setup, task allocation and management to achieve optimum utilization of resources
- › Multi-level, hierarchical calendars for collaboration between users across time zones, geographical locations, regions, departments and functions
- › Integrates with Microsoft Outlook for task delivery and response from within Outlook
- › Support for multiple channels for task delivery and response-web, email, PDA, voice & IM

Business Forms and Processes

- › Free form, web-based process designer with Visio-type interfaces within SharePoint
- › Allows initiation of BPM workflows from document libraries, lists and content types
- › Wizards for process creation with option to save processes as templates
- › Enables dynamic modification of business processes without programming knowledge
- › Offers a rich set of SharePoint Actions that inherit and manipulate SharePoint metadata during a workflow process
- › Web services and XML for integrating SharePoint forms with business processes and business applications
- › Workflow initiation on all SharePoint events including "ING" events
- › Option to invoke Windows Workflow Foundation activities within Skelta Process Modeler

Portals

- › Enables centralized process management through a unified interface
- › Customizable process documentation templates
- › Modeled on SharePoint 2007 user interfaces
- › Allows complete customization of the user interface through HTML templates

Enterprise Content Management

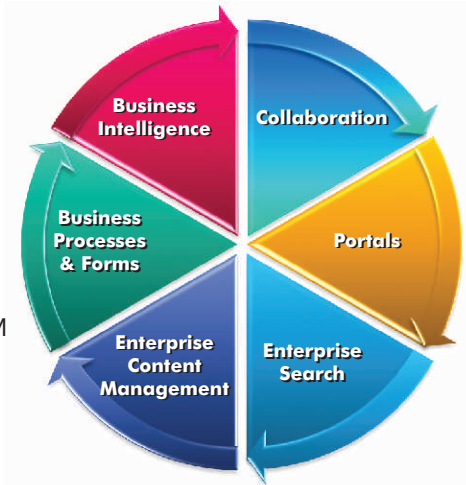

- › Integrated content management of process documentation, process definitions and attributes of manual, automated and Skelta processes
- › Change management and version control for enterprise processes

Business Intelligence

- › Comprehensive BAM dashboards for analysis and reporting on process execution
- › KPIs and performance analysis for Skelta-automated processes
- › Display of workflow status and reports using built-in Web Parts
- › Complete audit trail of process activities

Benefits

Empowered business users: Skelta SharePoint Accelerator takes document management and team collaboration to the next level by allowing business managers to build enterprise-wide workflows for processing documents, custom lists and content types in SharePoint.
